Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-39, drawn to an endoscopic device, classified in class 600, subclass 104.
- II. Claims 40-60, drawn to a method of performing an operative procedure, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process. For example, it could be inserted into a body while the distal assembly is in an open rather than closed configuration in order to dilate or cut tissue during insertion. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
